

VISION 2030 ALIGNED

Strategy, Software & Infrastructure — One Trusted Partner.

A Riyadh-based IT & consulting practice that designs, builds, configures, and maintains complete technology ecosystems for businesses across the Kingdom.

FOUNDED

KSA

KINGDOM-WIDE

A full-service IT consultancy built for Saudi Arabia.

Al Mutakamil IT and Consulting was founded in 2025 to close a gap in the Kingdom's IT services market: the gap between firms that advise but don't deliver, and firms that deliver but don't advise.

We brought experienced consultants, software engineers, infrastructure specialists, and digital marketers together under one roof. The result is a single accountable partner that can take a client from a vague idea, through architecture and design, all the way to a live system with an SLA wrapped around it.

Our dual-mode structure — a consulting practice that builds relationships, and a delivery arm that executes — keeps overhead low and keeps incentives aligned with yours: build the right thing, build it well, and keep it running.

“

We are not just advisors. We build, install, configure, and maintain — giving clients a single trusted partner for every technology need from strategy to execution.

THREE DISCIPLINES, ONE TEAM

■ **Consulting** — Strategy, transformation & delivery

■ **Software** — Custom platforms & enterprise systems

■ **Infrastructure** — Networking, cloud & security

BUILT ON FIVE CAPABILITY PILLARS

Consulting & Strategy

Transformation planning, governance & IT roadmaps

Software Development

Web, mobile, ERP & enterprise systems

Digital & Marketing

Branding, SEO & digital experience

Infrastructure

Networking, security, servers & workplace systems

AI & Automation

Intelligent workflows & analytics

Four principles. One continuous delivery cycle.

01

Business First, Tech Second

We start with the outcome you need, then choose the technology.

02

End-to-End Ownership

One firm. One contract. From whiteboard sketch to support ticket.

03

Build, Don't Just Advise

We deploy, integrate, and operate the systems we recommend.

04

Local With Global Standards

Riyadh-based teams, methodologies from global engineering firms.

A modern delivery process designed for execution.

01

DISCOVERY

Understand & Audit

Infrastructure, workflows & business objectives evaluated.

02

PLANNING

Architect The Solution

Roadmaps, architecture & implementation strategy defined.

03

EXECUTION

Build & Deploy

Configure, develop & integrate with milestone delivery.

04

SUPPORT

Manage & Scale

Monitoring, maintenance & long-term scalability planning.

01 → 04

One continuous cycle, not four separate vendors — the team that audits is the team that builds and supports.

11 pillars. 30+ service lines.

From digital transformation and software engineering to infrastructure, AI, and cybersecurity — every capability below is delivered by the same accountable team.

01 Consulting & Strategy
Transformation, governance & documentation

02 Web & Application Development
Corporate sites & custom web applications

03 Software Development
Mobile, CRM, POS, portals & custom systems

04 ERP Solutions
End-to-end ERP deployment & integration

05 eCommerce
Platform builds & payment integration

06 Digital & Marketing
SEO, branding & digital marketing

07 Data, BI & Automation
Dashboards, business intelligence & automation

08 AI & Intelligent Automation
Intelligent agents, workflow automation & strategy

09 Physical Infrastructure
Security systems, networking, servers & workplace IT

10 Cyber Security
Risk assessment & network security

11 Managed Services
Maintenance contracts & support desk setup

Consulting & SaaS-Based Services

STRATEGY, SOFTWARE
& DIGITAL DELIVERY

IT Strategy & Roadmaps

Transformation roadmaps & gap analysis.

IT-Business Alignment

Aligning technology investment to goals.

Business Analysis

Requirements & process mapping.

Process Optimisation

Workflow redesign & efficiency gains.

Change Management

Structured technology-led change.

PMO Setup & PM Consulting

Governance & delivery frameworks.

Procurement Consulting

Vendor selection & sourcing.

Facilities Management Consulting

Systems & compliance advisory.

Documentation Support

Enterprise docs for high-end requirements.

Web Applications

Corporate sites & custom portals.

Mobile App Development

Native & cross-platform apps.

CRM Development

Bespoke systems for specific workflows.

POS Solutions

Point-of-sale for retail & F&B.

ERP Implementation

Deployment, migration & training.

Business Intelligence & Dashboards

KPI frameworks & live dashboards.

Data Analytics

Predictive analytics & modelling.

Process Automation

Workflow automation & integrations.

AI Agent Development

Agents for queries & task execution.

AI Consulting & Strategy

Readiness assessment & governance.

SEO & Digital Marketing

Search visibility & performance marketing.

Graphic & Brand Design

Identity systems & collateral.

eCommerce Platforms

Storefronts & payment integration.

Custom System Development

Internal tools & operations platforms.

Physical Infrastructure & Others

SUPPLY, INSTALL,
SECURE & MAINTAIN

The layer most consultancies subcontract — we don't. Our own teams supply, install, configure, secure, and maintain the physical systems that keep a business running.

 Security & Surveillance Systems Design, supply & install of monitoring systems.	 Access Control Card, biometric & mobile access systems.	 Networking Structured cabling & wide-area connectivity.	 Server & Rack Infrastructure On-premise deployment & virtualisation.	 Asset Management & Tagging Audits & lifecycle tracking platforms.
 Workplace Productivity Systems Mail migration & collaboration platforms.	 Risk Assessment & Security Audit Posture evaluation & remediation roadmap.	 Network Security Implementation Hardening & traffic segmentation.	 Maintenance Contracts Licensing & on-site/remote support.	 Support Desk Setup Workflows, SLA rules & staff training.

In-House

No subcontracted install crews. The engineers who design the network are the same ones on-site running cable, racking servers, and commissioning the system — under one SLA, from hardening to helpdesk.

Survey	Install	Secure	Maintain
Site assessment & design	Supply & on-site commissioning	Hardening & risk assessment	AMC & support desk coverage

One partner for the whole technology stack — not a vendor for each piece of it.

Most businesses in the Kingdom juggle a consultant for strategy, a developer for software, an installer for infrastructure, and a freelancer for marketing — four invoices, four timelines, and nobody accountable for the whole picture. We replaced that with one team.

01

Single Point of Accountability

One contract, one team, one SLA — strategy through support.

02

We Execute, Not Just Advise

Every recommendation is one we can also build and run.

03

Built For The Kingdom

Riyadh-based teams, Vision 2030-aligned delivery standards.
